In the Claims

Please add the following new Claims 17, 18 and 19 as follows:

20. 17.

A circuit comprising:

a first resonator magnetically coupled to a second resonator, said first and second resonator each further comprising:

a first capacitor having a first capacitance and a first inductive element having a first inductance connected between a signal line and ground;

a second capacitor having a second capacitance and a second inductive element having a second inductance connected between said signal line and ground so that current flowing through said first and second inductive elements are substantially in opposite directions; and

wherein the product of said first capacitance and said first inductance is substantially equal to the product of said second capacitance and said second inductance; and

wherein said first and second inductive elements of said first resonator are magnetically coupled to the first and second inductive elements of said second resonator.

19. 18.

A circuit comprising:

two or more resonators magnetically coupled to each other in cascade, said two or more resonators each further comprising:

a first capacitor having a first capacitance and a first inductive element having a first inductance coupled between a signal line and ground;

a second capacitor having a second capacitance and a second inductive element having a second inductance coupled between said signal line and ground so that current flowing through said first and second inductive elements are substantially in opposite directions; and
